

## WP-Series

The WP-Series weatherproof loudspeakers are designed as Full-Range and Low-Frequency for constantly outdoor application.

Due the usage of GRP materials and the application of new designed speaker chassis with Neodymium magnets, the loudspeakers of the WP-Series are featuring unsurpassed stability besides a very light system weight at the same time. Due to a special laminating procedure the surfaces, available in nearby all RAL color shades, are absolutely weatherproof and light resistant.

Due to the use of high quality systems and the broad variety of models, it is easy to solve all possible audio-challenges in the professional field.

Thanks to the wide scope for colors and shapes, the loudspeakers are easy to integrate in different existing circumstances. In new projects nearby all designs could be realized due to the possibilities in color and shape.

The nicely developed user software of the WPA-Series remote unit, allows to identify and control Speakers, even at remote and difficult to reach positions.

## WPA-Series

The advantages of the WPA-Series speakers are supplemented by digital signal processing and high efficient Class-D power amplifiers.

The WPA-Series loudspeakers are featuring a remote manageable tone and volume control. By the means of an active frequency control network, the regarding drivers are processor-controlled and powered by independent digital power stages to gain a perfect and clear reproduction of the whole frequency range.
